

NOW LET'S FIND OUT

Where are your visitors dropping off?

May 25th – July 20th 2025, Own analysis

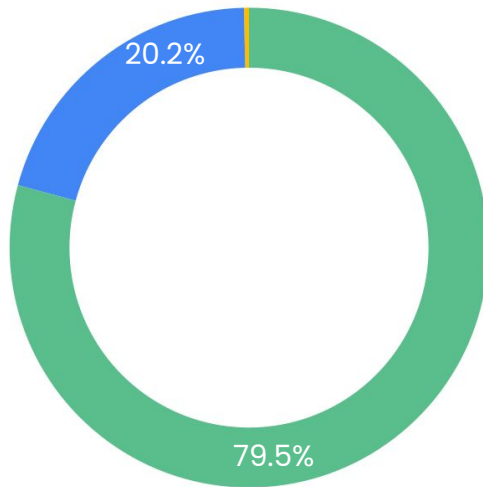

~82% of traffic comes from mobile devices; mobile devices bring 79% of transactions, while desktop contributes 20.2%

Your store's current performance

Median CVR

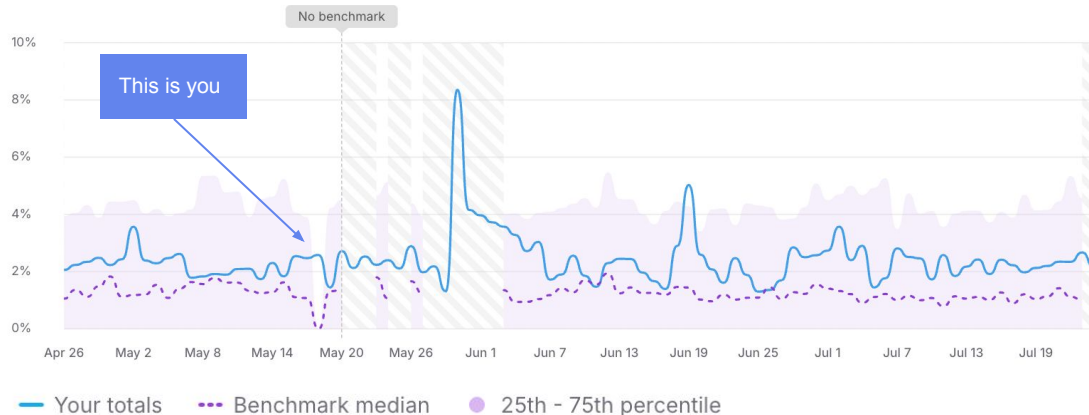

1.23%

Peer benchmark—an industry-wide average

Top 25%

>4.22%

Top performance within your niche

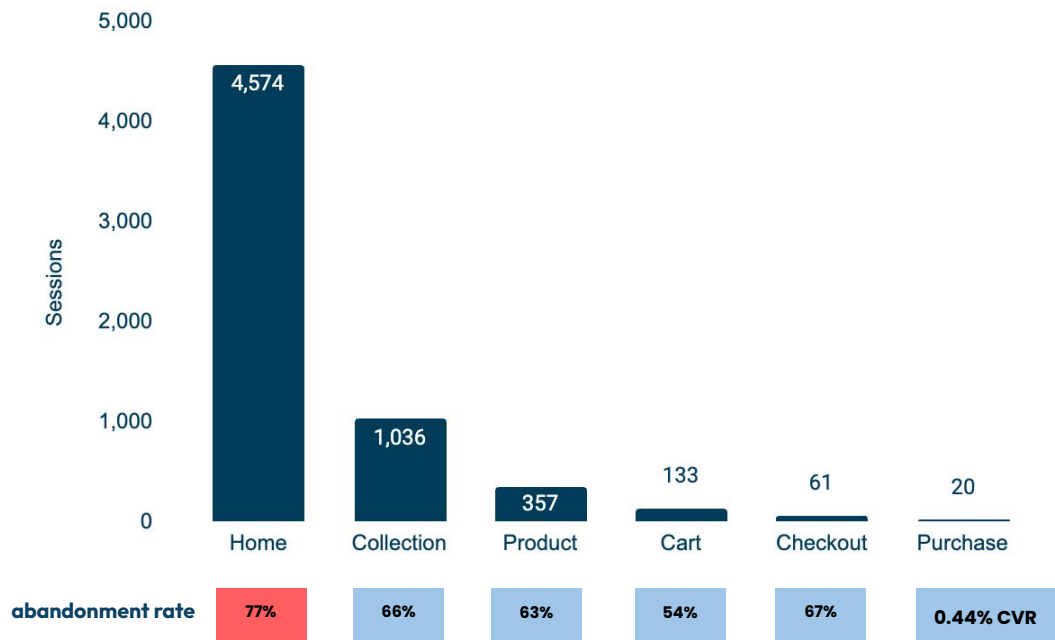

Your store's average CVR (2.50%) is currently higher than the industry median (1.23%) but significantly behind the top 25% of stores, which convert at over 4.22%. This gap presents a clear opportunity for growth, but also a reason for serious investigation and concern.

In the slides ahead, we'll outline actionable strategies and key insights to help improve your conversion rates. By targeting high-impact areas and maintaining testing momentum, your store can first reach the industry average—and then work toward top-tier performance.

Source: Shopify Analytics from April 26th - July 24th 2025, Own analysis

Users who enter through the homepage have a big drop off (77%) and just 23% of them proceed to the collection page

Users who entered by the homepage

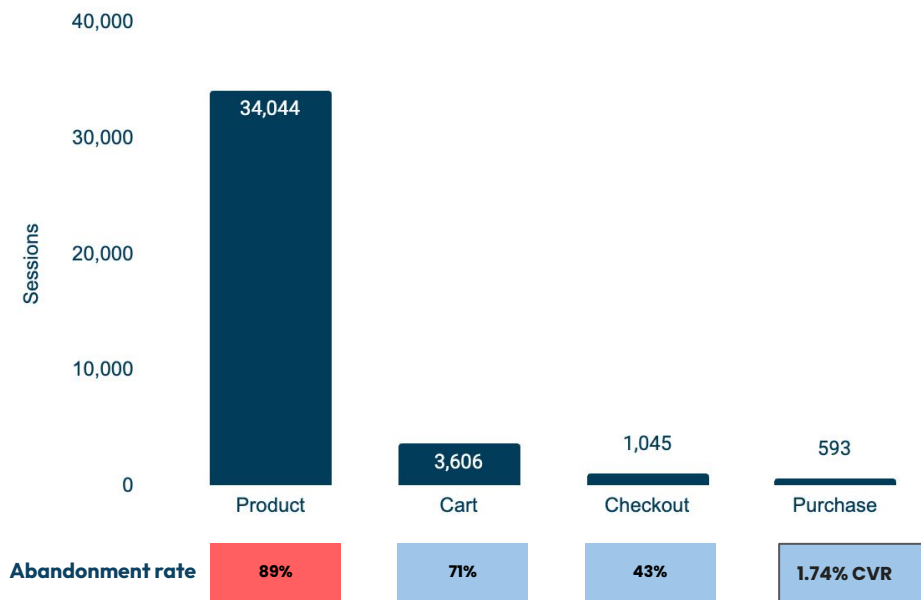

Users who landed on the homepage had the lowest funnel conversion rate, just 0.44%. This is unusual, as homepage visitors typically explore more, become more familiar with the offer, and tend to convert better later in the funnel.

However, most users drop off before moving to other pages, and the cart rate drop-off is the lowest among all navigation paths.

This clearly shows that the homepage is not educating users or setting clear expectations from the start, leading to frustration and early drop-off.

Even users who enter through the product also have a big drop off (89%) and just 11% of them adding products to their cart

Users who entered by the product pages

A similar scenario happens here, but it's somewhat expected: users also tend to drop off early when starting from product pages.

What's surprising, and uncommon in most e-commerce sites, is that starting from product pages results in the highest final conversion and checkout rates. This suggests that the additional steps involved when users start from the homepage or collections are not persuasive or helpful in guiding them to the right product.

That said, when we look closely at product page performance, there's still room for improvement, especially in reducing bounce rate and encouraging users to add more items to the cart.

We should focus on improving the product page content for new users, mainly because of the higher bounce rate despite a good average session duration

Page	Sessions	% Sessions	Bounce Rate	Avg. Session Duration
Home	4,587	8.0%	9.5%	1m 17s
Collection	8,563	14.9%	3.5%	1m 11s
Product	34,045	59.3%	5.9%	1m 34s
Cart	6,748	11.8%	2.3%	1m 16s
Checkout	3,448	6.0%	8.6%	2m 29s

Comparing different page types, it's clear that product pages receive the majority of traffic (59.3%) and have a good average session duration (higher than other stages), but also show a significant bounce rate (5.9%). This highlights the importance of capturing users' attention in the first sections to prevent them from leaving the page too soon.

We should invest in capturing more leads and it's possible to have a more aggressive approach with the Email channel. It's also worth prioritizing Paid Shopping over Paid Search

Channel	%	Bounce	Session Dur.	%	eCVR	RPV	AoV
Referral	31.8%	3.76%	0m 59s	12.1%	0.12%	\$0.11	\$90.21
Cross-network	16.7%	6.03%	2m 43s	38.1%	2.76%	\$2.62	\$95.08
Paid Shopping	11.5%	3.99%	3m 3s	5.0%	2.65%	\$2.66	\$100.48
Direct	10.9%	12.00%	2m 12s	6.4%	4.00%	\$4.51	\$112.64
Paid Search	9.2%	7.58%	1m 34s	10.1%	0.53%	\$0.60	\$112.29
Email	6.9%	8.48%	3m 22s	9.6%	8.22%	\$9.49	\$115.48
Organic Search	5.9%	10.85%	4m 17s	6.0%	3.67%	\$3.91	\$106.53
Affiliates	3.0%	6.69%	3m 49s	7.3%	3.62%	\$2.91	\$80.34

Source: GA Analytics from May 25- Jul 20 2025

Referral contributes 31.8% of users but has the lowest session duration, CVR, and RPV. This suggests that visitors coming from other websites are less interested in purchasing, and there's room to improve the quality of backlinks.

Email marketing is the most effective channel, showing the highest AOV, RPV, eCVR, and session duration after organic search. We should focus on capturing more leads and consider being more aggressive with this strategy.

Paid search shows the second-lowest RPV and eCVR, **in contrast to paid shopping**, which performs over 2x better.

Organic search brings in fewer users, but with strong session duration, highlighting the value of investing in SEO.

The vast majority of the audience belongs to the new user category (91%) rather than returning users, but returning users bring +71% conversion

New / established	Sessions	% Sessions	Revenue	% Revenue	Transactions	AoV	eCVR	RPS
new	323,738	91.4%	\$270,067	76.1%	237	\$1,139.52	0.07%	\$1.20
established	30,382	8.6%	\$84,761	23.9%	57	\$1,487.04	0.19%	\$0.36

New vs Returning report

We should focus on attracting more returning users, as the current percentage of returning users is very low. Implementing more remarketing strategies, enhancing CRM, and possibly introducing loyalty programs could be beneficial.
